Decryption: The process of the collapse of the Millennium Plan "A Big Game of Chess" - Temple of Literature - World Wide Blog - World Wide Reader Network (Computer Version)

It has been more than ten years since I first heard the word "a big game of chess". When someone in WeChat began to mention it, it seemed mysterious and unfathomable. However, the speaker is in a high position in the propaganda mouth of the mainland, which is obviously not a self-made word. His sluring and wanting to talk but stopping aroused my extreme curiosity, but he refused to talk deeply. I guess it should be the garbage of the former Soviet Union or Mao's era. It was not until he then visited the mainland and met several virtuous and respected institutional elders that he basically confirmed the meaning of Xi's so-called "new era" and "a big game of chess".

They are knowledgeable and have visited the United States many times. They are retired experts or high-ranking officials who know the West, and can also access many colleagues or top-level internal documents. We first talked about Xi Jinping, who has recently come to power, and the South China Sea dispute that has been made public, the Belt and Road Initiative and the fight against corruption, etc. But they sneered at my selective anti-corruption and other views, and they were unwilling to respond. But when the topic turned, it was proudly mentioned that Xi Jinping was an extremely remarkable person and a cross-era leader. As far as I know, they are not ordinary citizens with a strong sense of personality cult. They solemnly said that Xi was playing a mysterious

chess game, which was very large and a millennium plan, and aggravated the tone: Westerners will never understand and understand! Hey hey, after saying that, he showed a mysterious smile. And he said that like many overseas Chinese, I have read a lot of books, and I must have been brainwashed. I immediately blurted out, he wants to "liberate all mankind", right? They were stunned at first, and then looked at me with a wry smile, clearly trying to say, "How do you know?"

In the past, every time we met, these elders were quite rational and polite, and we could discuss any problem objectively. This time, I was suddenly brainwashed for joking without courtesy. It should be the first time. Not only am I not angry, but I believe that there must be a universe here. What kind of mysterious chess is so powerful that it can still be staged for a thousand years, but Westerners will never figure it out? I, a 77-class student who "learned Chinese and Western", have been a "top student" in their eyes for decades. Can I be worse than Xi, a "worker, peasant and soldier"? They must have read some internal confidential documents, or been confused by some drugs, or some big tricks are on the way. These dialogues have contributed to my extreme curiosity and attention to early events such as Xi Jinping, the trouble in the South China Sea, and the Belt and Road Initiative.

Out of my obsession with a big game of chess, I began to analyze the intention of the Communist Party of China to expand the South China Sea and the basis of international law. The people's situation on the mainland has been incited, and my blog posts about the situation in the South China Sea and its subsequent impact have been insulted by many netizens. Nowadays, it seems that most of the discussions have become reality. For example, three of them: "The South China Sea was defeated by the rotten system and Ah Q's dream", "A stinky chess piece crushed the Chinese dream of the South China Sea" and "Will the arbitration of the South China Sea fall into the "A-Japanese storm" again? Just looking at the title, the tragic defeat of this big chess game has been predicted

eight years in advance.

Another chess game with great fanfare is the so-called "Belt and Road". In May 2017, in "The Belt and Road Initiative: Do you want to ask for the way or the big red dragon's road of no return?" In this article, I took the lead in putting forward the concept of SB. The word quickly spread on the Internet and became a popular term to describe a game of bad chess. Perhaps this joke will eventually be collected into the Chinese idiom dictionary and become an immortal classic story of Chinese civilization. The Xiong'an Special Zone of the Millennium Plan is the internal window of the Belt and Road Initiative. These things, associated with each other, can glimpse the ambition and ambition of Xi, which has a long history.

It was not until five years later, in September 2017, that Xinhuanet, the mouthpiece of the mainland, "decrypted" Xi Jinping's "A Big Game of Chess", which is now attached to the poster article. However, this is only an official trick article. The actual details or strategic purpose of a big game of chess are much more complex or exciting than those described in the official article, and it is also more incomparable. In the blink of an eye, it has come to 2024, and this big chessboard has been basically revealed. Some people say that it is a stinky chess..., such as myself in 2016. But now it seems that Xi Jinping's big game of chess is a wonderful epic strategic layout, which may be second to none. Because this chess game has changed China, changed the world, and completely changed the fate of mankind, it is worth recording and discussing in detail.

I blurted out that Xi Jinping wanted to "liberate all mankind" as a big chess game for him, which seemed to hit the theme. Xi must destroy the United States, eliminate Western civilization, and control the civilized world with the corrupt culture system of the corrupt dictatorship of the Chinese people, and other hereditary dictatorship and corrupt interests of the family and the core of the party. A big game of chess, big foreign propaganda, over-limit battle, and later Chinese dream, powerful country,

east rise and west down and other statements, in fact, are just around this theme. However, Stalin, Mao Zedong's traditional subversion of force or people's war (human tactics) obviously did not achieve their purpose of liberating all mankind, especially against countries like the United States, which was completely useless.

Over-limit war is the core of a big game of chess. "Super Limit War" was written at the end of the last century and was introduced to the U.S. Naval Academy in 2000. I have the Chinese version of 2011 in my hand. After Xi took power, he couldn't put down "Extra-Limited War". Follow the gourd and draw the ladle, and all kinds of domestic and foreign means are fully spread. If you want to do something big, you will definitely raise a personal cult. But Xi's road to the leader is not smooth. He always covers up and pretends to be a thief. He has been tossing for many years. The reason is that there is only a chessboard, but there is no progress.

But Xi did not give up its traditional military strategy. The reclamation of reefs in the South China Sea and the concessions of the Philippines, even with the ruling of the International Court of Justice, the mouthpiece of the Communist Party of China can say that it is a waste of paper. The long-term deafness and dumbness of the United States and the West has made Xi taste the sweetness. With the cooperation of the Belt and Road Initiative and war wolf diplomacy, the speed of expansion is getting more and more uncontrollable. Science and technology innovation curve overtaking, Made in China 2025, etc., the "extra-limit war" mode to deal with the world is familiar, which reached its peak before the epidemic.

Whether it was the military troubles in the South China Sea, the trade policies that distorted the laws of the market, and theft by borrowing Sino-foreign scientific and technological cooperation, they all happened before Xi came to power, but they were somewhat restrained and did not make much movement. However, a game of big chess propaganda that is frequently pushed internally has opened the green light for all these

robbing and deception, allowing these disasters to spread rapidly to major developed countries like floods, while the previous Belt and Road Initiative mainly targeted underdeveloped countries. The Communist Party of China has found a way to bring down the American empire: using developed countries such as the United States to make a lot of money, expand armaments, bribe other countries' dignitaries and small countries to build, try to control all domestic and foreign media with money, beat chicken blood from time to time, and create an atmosphere of east-west decline. These systematic operations make a big game of chess, seemingly Mysterious and blown to the sky, the ghost has not dissipated until now.

The rise of Guo Wengui must be mentioned in decrypting a big game of chess in the super-limit war. As a glove for the escape of the high-level officials in the system. His breaking news activities exposed some of the Communist Party of China's unsightly gangster behaviors and ambitious plans, collectively known as "blue and golden". In fact, the rise of the whistleblowing culture has caused a major blow to the leakage of a big game of chess plans, especially the means of over-limit war, which shocked the U.S. court and opposition. Netizens are actually not interested in the authenticity of certain information, internal disputes and Guo's true identity and later behavior. Even if the leak is untrue, it has objectively caused a huge online sensation.

The relationship between the United States and China has long-term blue and golden strategy and the greed of capital, which has made the Communist Party of China benefit for a long time and is pressing step by step. It seems that a big chess plan has or will decide the United States and Western countries. In 2015/2016, in the late period of Obama's administration, the U.S. think tank had proposed strategic adjustment countermeasures, but there were huge strategic differences between the ruling and the opposition, the two parties and the people, which gave Xi Xi the dawn of victory in the over-limit war. When Obama came to visit,

there was not even a red carpet, and there was no door to get off the plane. As for Xi's promise to Austria to suspend construction in the South China Sea, it was thrown into the waste paper bin by Xi, and Ao did not have any response. Such humiliation is to test the level of the other party's red line and patience.

Trump was tough on China before he took office, but after he took office, he did not adjust his policy towards China and immediately took it seriously. He still praises Xi Jinping from time to time and fantasizes about meeting Xi as soon as possible, but it is not excluded that he has the purpose of testing Xi.

At this time, Xi was already in high spirits, thinking that the Americans were just like this, or Hu Angang and other masters had vision. China had already surpassed the United States in all fields. No wonder Obama stopped talking. Jiang Hehu and others are really useless waste. They have read books for so many years in vain. The whole world should come to the Forbidden City to kneel down and worship, not to mention that they have just given the green light to the business of the Sichuan family. Why don't you hurry up and thank the Lord Longen? Eating Trump, a businessman, thinks that it's easy to use the means of over-limit war.

According to a book by a former national security adviser to the White House, Trump visited China in November 2017. When Xi visited the Forbidden City, he made a big deal of the appearance of the heavenly dynasty and suddenly intimidated Trump and others. In his speech, he asked Li Keqiang to threaten the United States to withdraw from the Asia-Pacific region, withdraw from high-tech and other fields..., so that China can dominate the world... In the future, the United States will only distribute the basic supply of energy, agricultural products and other basic dependent countries of the Communist Party of China... The Communist Party of China later publicly designated it as the national policy of "community of human destiny". Trump was furious when he

heard this and left the scene immediately. Readers will ask, is it possible that Xi is crazy to say these words in front of VIPs without completely ignoring diplomatic etiquette? National affairs are not like children's play. What if the VIP turns around?

Obviously, all of this has been scrutinized and previewed. Intimidation is for ambition, because "the rise of China is unstoppable". The overlord is hard to bow, there is no B plan, no other choice, let alone retreat. This is the confidence or bottom line thinking, the so-called "four self-confidence" strange Tianchao culture. Associated with Xinhua.com's "What kind of chess game has Xi Jinping laid out since the 18th National Congress" (see below), which was also published in the same year. This is also a declaration to the world that I have already made arrangements, so I won't pretend. When you come, just kneel down and beg me. I don't care what your American reaction is after hearing it!

In Trump's team, there is a young national security consultant whose Chinese name is Bo Ming. Unexpectedly, he was rudely stopped by mainland bodyguards, which had never happened before. Because he had lived in the mainland and had a lot of research on Chinese history and culture, he almost immediately saw through the revival of Xi's corrupt feudal cultural mentality in the Qing Dynasty. On the return flight, Trump asked everyone in the United States to write down his feelings briefly, and everyone responded unanimously. The hostile attitude of the Communist Party of China and the undisguised ambition of the Tian Dynasty have verified the strategic adjustment countermeasures proposed by the previous think tank. The White House immediately established a new national policy for strategic change and counterattack. Then the U.S.-China trade war broke out, and the world began to make a sharp turn.

More than a year before the start of the trade war, in a large area of noise of "the United States is scared, scared to pee", a few official Beijing think

tanks made bold predictions about the prospects of Sino-US relations, including the trade war, and also made cautious suggestions. However, the Communist Party of China and Xi are full of confidence, and they shout the powerful national slogan of winning big, small fighting, and lying down to win. It verifies the proverb that if God wants to perish, he must first make it crazy. In fact, until the outbreak of the epidemic, the trade war did not achieve obvious decoupling effect, and the Communist Party of China still made a lot of money. However, its public opinion effect and the offensive of turning the people's psychology over have completely reversed the prospects and subsequent trends of U.S.-China relations.

At the same time, Hong Kong's occupation of Central and the subsequent anti-sending movement surged. Anti-dictatorship and anti-tyranny videos are transmitted to all corners of the world every day, which is trangled with the trade war between the United States and China, and makes people all over the world see the face of the Communist Party of China clearly. Voices in favor of containment of tyranny began to emerge, and some speculative businessmen who were deeply involved in U.S.-China trade and wanted to make a lot of money were shaken. The people of Hong Kong have reversed international public opinion, encouraged people from Japan, South Korea, the Philippines, Vietnam and other countries, and also changed the long-term appeasement policies of Western countries. Hong Kong has become a heroic city. Although it has paid a heavy price for burning with China, it has successfully blocked the dream of a big game of chess. This is a following story. Hong Kong's move also completely changed the Taiwanese people's understanding of the Communist Party of China. Tsai Ing-wen was re-elected as the President of the Republic of China with a high vote, and Xi was forced to die young.

Dictators love face, and Xi Jinping has been surrounded by more flatterers at this time. The farces of the heavenly dynasty or the heyday

of the Tang Dynasty are also becoming more and more frequent. Seeing that the trade war and the Hong Kong struggle could not be calmed down, the most powerful move in a big game of chess was about to move.

The earliest biological warfare video recording was Chi Haotian's speech in 2005. CCTV happily announced on April 5, 2018 that the coronavirus and vaccines are ready, and it seems that everything only owes to "personal deployment and personal command". Beginning in the summer of 2019, there was a fever of virus or infectious disease exercises all over the country. It is worth remembering that on September 18, 2019, Wuhan Tianhe Airport staged a drill on the "whe whole process of dealing with the novel coronavirus", which was reported by many party media. On September 1, 2020, CCTV released a short video. Chen Wei, the major general of the Communist Party of China, who took over the Wuhan P4 Virus Research Institute, said carelessly to a group of children that the COVID-19 vaccine was manufactured from the production line on February 26, and it was a "official vaccine".

At this time, the first official virus case in the United States has not been identified. Many people, including myself, were confused by these self-propaganda. Leaving so much obvious evidence, aren't you afraid of being held accountable by the outside world? Now it seems that Xi doesn't care about releasing the virus with great fanfare and messing up the world. Because the Communist Party of China has prepared the vaccine early and is convinced that its superior quality, the United States will not be able to cope with it in a few years. Because there is no vaccine preparation in the outside world, we can only wait for the end of death. In addition, the supply chain of anti-epidemic materials is in hand, and all countries should come to worship and copy the work. Xi's ignorance, arrogance and arrogance far beyond the imagination of ordinary people have been exposed.

The official desperately indoctrinated that the United States must be

finished this time. It's the virus I released. What can you do? " Anyway, you or anyone can blame you or anything: "It's you, it's you! ", no logic and evidence are required. In the three years of the epidemic, especially in the spring of 2021, there were a large number of articles on WeChat, overwhelmingly shouting that the United States would soon (three days) disintegrate. Are you still afraid of international blame? Joke, a big game of chess has been arranged long ago. China must be the world's number one anti-epidemic victory country, and it is also the only country with rapid development after the epidemic. And the United States is one of the eight failed countries in the fight against the epidemic... It will never be qualified to be called the boss of the South China Sea again. The bones of millions of people seem to have achieved Xi Jinping's greatness and extraordinary.

The ignorance and arrogance of the Communist Party of China have indeed confused many people within the wall and those overseas Chinese who have been kidnapped in a big game of chess. The extreme zero policy has assisted the long-standing U.S.-China trade war. Coupled with the Biden administration's restrictions on technology, investment and chips, the withdrawal of foreign investors, investment stagnation and the decoupling of the industrial chain have quietly formed an irreversible trend. There are countless secondary disasters caused by the long-term blockade. The mainland people have paid a heavy price for a big game of chess, and the blank paper movement spread rapidly. Finally, at the end of 2022, the cruel zero-clearing measures could not be sustained, and Xi was forced to start copying the homework of the outside world. Despite the desperate blocking of news, the sudden turnaround and ineffective vaccines caused a large number of sudden deaths of patients, the explosion of crematoriums, and the video of burning corpses everywhere still spread all over the world. In a big game of chess, the longest layout time, and the most boasted was the biological over-limit battle. Under Xi's personal deployment and command, it finally ended with a defeat of killing 100 enemies and losing 10,000.

Inside the mainland, from the spring of 2023, with the evacuation of foreign investors, investment stagnation and the decoupling of the industrial chain, foreign trade income, real estate market and stock market fell together, while unemployment, bankruptcy and homelessness increased sharply. Now many people are beginning to understand the inevitable consequences of eating American food and smashing American pot. The Xiong'an New District, which has become a thousand-year plan, has become a place overgrown with weeds. The Xi Communist Party's rescue measures are renovated every day on average, but with little effect. It is estimated that about 800 million people are in debt, 400 million people have no savings, and it is expected that 400 million people will become unemployed, or officially flexible employment. The three major international rating agencies all rated China as negative, and the people's confidence fell to freezing point. At the same time, the Communist Party of Xi began to seize the secret service, promote the experience of fighting people in the maple bridge, and step up the pressure and control of the people. The upper-level Ministry of Foreign Affairs and the Rocket Army secretly surrendered to the U.S. Empire, and all the missile secrets were leaked. The economic decline caused by a big chess game fell from the top and the total collapse. The loss of confidence may have just begun, and the hard life of the mainland people is still on the way. Except for China, the U.S. and Japan's economic bull market is soaring. Isn't it a self-loss of 10,000 yuan?

The external environment has also undergone earth-shaking changes. The sharp decline of the treasury and foreign exchange has led to the failure of the Belt and Road Initiative in many places, and the little brothers have run away one after another. In the past, the Communist Party of China used to embargo goods or threaten other countries by force at any time, but now it is no longer good. It can only rely on the evil axis of the combination of China, Russia, North Korea and Iran to strengthen its courage. Neighboring countries have re-sided, or come to a situation of direct confrontation, such as Japan, South Korea, the

Philippines, Australia and other countries. A small Asian NATO led by the United States has been formed. A large number of modern weapons, from B61 tactical nuclear weapons, medium-range missiles, all kinds of advanced fighters to submarines and aircraft carriers, etc., have been deployed layer by layer, forming an iron barrel-like encirclement, forcing the Communist Party of Xi to play a suicide game in the Taiwan Strait or the South China Sea. Will China's re-entrapment of the "A-Japanese storm" predicted eight years ago be re-endered?

The reason for the collapse of a big chess game can be inspired by many factors such as history, culture, system, ideology and civilization, but the most fundamental thing is the feudal royal culture, which is concentrated on someone, that is, it becomes a disaster for the whole nation. Xie Bin, a famous writer on the Internet, first called Xi a primary school student, and I thought so. Without culture, relying on posting book lists and reading typos to govern the country limits the improvement of cognitive ability and three views, coupled with personality defects and failed teenage experiences, how can there be invincible reason? It is a pity that a large number of blind flatterers, including the elite of the Communist Party of China, are deeply involved in it and can't extricate themselves. The rise and fall of a big chess game is the most thrilling non-traditional war of the century with detailed records in the long history of mankind. You and I are lucky witnesses. (April 19, 2024)

words, and it takes 12 minutes to read

[Learning in progress] In the five years since the 18th National Congress, General Secretary Xi Jinping has taken over the time and trend of national development, made overall planning and deployment, and carefully laid out a big chess game of development with a series of big moves and strategies of governing the country.

Xinhua News Agency's "When Learning is in progress" original brand column "Kysho" will launch a series of "Big Chess Game" articles one after another from today, and today will launch the first article - "What kind of chess has Xi Jinping laid out since the 18th National Congress".

On November 15, 2012, the 59-year-old Xi Jinping was elected General Secretary of the CPC Central Committee at the First Plenary Session of the 18th Central Committee of the Communist Party of China, becoming China's new naviger.

Over the past five years, led by the five development concepts, the Party Central Committee with Comrade Xi Jinping as the core has coordinated and promoted the overall layout of the "five-in-one", and coordinated the strategic layout of the "four comprehensive". A series of important decisions and deployments are like pawns, constantly seeking momentum and doing "eyes" on the development of the new era. .

In January, the start-up is fixed.

No strategy is created out of thin air. Xi Jinping said, "The 'four comprehensive' strategic layout is derived from the actual needs of China's development, from the eager expectations of the people, and also proposed to promote the solution of the outstanding contradictions and problems we face."

Before being elected as General Secretary, Xi Jinping had more than 40

years of work experience. From villages to counties, from cities to provinces, Xi Jinping has a deep understanding of China's basic national conditions and the wishes and expectations of the Chinese people. After entering the central government, he has directly participated in the formulation and implementation of the Party and the national political guidelines.

Let's look back at the first month of Xi Jinping's tenure as the General Secretary of the CPC Central Committee:

On November 15, 2012, on the first day of his election as the General Secretary of the CPC Central Committee, in front of more than 500 Chinese and foreign reporters, Xi Jinping solemnly declared, "The people's yearning for a better life is our goal".

On November 29, Xi Jinping put forward the "Chinese Dream" of realizing the great rejuvenation of the Chinese nation for the first time when watching the exhibition "Road to Rejuvenation". He emphasized that "empty talk misleads the country, and practical work revives the country", and made a strong mobilization to achieve the goal of "two hundred years".

On December 4, when commemorating the 30th anniversary of the promulgation and implementation of the current Constitution with all walks of life in the capital, Xi Jinping solemnly stressed that "the rule of law is the basic strategy of the Party to lead the people to govern the country", and pointed out that we should "adhere to the integrated construction of the rule of law, the rule of law government and society under the rule of law".

On the same day, the meeting of the Political Bureau of the Central Committee adopted the "Eight Provisions". Xi Jinping and the comrades of the Political Bureau of the Central Committee took the lead in improving the work style, and the guiding ideology was to strictly govern

the Party.

On December 7, Xi Jinping left Beijing for the first time after being elected General Secretary. He came to Guangdong Province, the forefront of reform and opening up, and said loudly that "reform does not stop, opening up does not stop".

In the first month of taking office, Xi Jinping started from the point and established the forward navigation beal.

In December 2014, Xi Jinping officially proposed during his visit to Jiangsu, "coordinate and promote the construction of a moderately prosperous society in an all-round way, deepen reform in an all-round way, promote the rule of law in an all-round way, and strictly govern the Party in an all-round way, and promote reform and opening up and socialist modernization to a new level", and for the first time, the "four comprehensive" were mentioned together.

In November 2016, Xi Jinping stressed at the Sixth Plenary Session of the 18th Central Committee that the coordinated promotion of the "four comprehensive" strategic layout is a new strategy for governing the country and rational government determined by the Party Central Committee to grasp the new characteristics of China's development since the 18th National Congress of the Communist Party of China. It is to promote reform and opening up and socialist modernization under the conditions of the new era, adhere to and The strategic choice of developing socialism with Chinese characteristics.

The report of the 18th National Congress of the Communist Party of China pointed out that it is necessary to fully implement the overall layout of the five-in-one of economic construction, political construction, cultural construction, social construction and ecological civilization construction, and emphasize the construction of socialism with Chinese characteristics. "Five-in-one" is the overall layout.

At the conference to celebrate the 95th anniversary of the founding of the Communist Party of China, Xi Jinping pointed out that the "five-in-one" and "four comprehensive" should promote and coordinate and implement each other.

The big chess style of governing the country is formed, and the pattern is presented.

Squeeze Tianyuan and do the whole job.

Building a moderately prosperous society in an all-round way is the first centenary goal set by our Party, and it is also a key step to realize the great rejuvenation of the Chinese nation. This major strategic goal is like a Tianyuan star on the chessboard, which is in the status of "middle army".

Xi Jinping said, "To achieve this goal by 2020, our country's development level will take a big step forward, and all our efforts should focus on this goal."

All-round well-off means that the achievements of development should benefit all the people, and the economic, political, cultural, social and ecological civilization should be developed in an all-round way. To achieve this goal, it is inseparable from the strong driving force of reform and opening up, the orderly operation of the country and society, and the strong leadership core.

In Xi Jinping's plan, the three strategic measures of promoting the comprehensive deepening of reform, the comprehensive rule of law, and the comprehensive and strict governance of the Party are like the three "eyes" around Tianyuanxing.

Comprehensively deepen reform, focus on solving the deep-seated contradictions and shortcomings of institutional mechanisms we are

facing; comprehensively rule the country according to law, and focus on promoting the legalization and institutionalization of national and social life. One "break" and one "stand", like the two wings of a bird and the two wheels of a car, continuously providing a source of power and a guarantee for the rule of law for building a moderately prosperous society in an all-round way.

The key to doing China's affairs well lies in the party. Adhering to and improving the leadership of the Party is the foundation and lifeline of the Party and the country. Only by promoting the comprehensive and strict governance of the Party, maintaining the Party's advancedness and purity, and focusing on improving the governing ability and leadership level can we provide a fundamental guarantee for building a moderately prosperous society in an all-round way, deepening reform in an all-round way, and governing the country according to law in an all-round way.

Therefore, the "four comprehensive" is not a single one, but an organic unity, which should be "coordinated, comprehensively balanced, highlight the key points, and drive the overall situation".

In the past five years, the current Central Committee has held six plenary sessions, of which four plenary sessions have been used to conduct special research and overall design of the "four comprehensive" strategic layouts.

In November 2013, the Third Plenary Session of the 18th Central Committee made a special study on the issue of comprehensively deepening reform and adopted the Decision of the Central Committee of the Communist Party of China on Several Major Issues on Comprehensively Deepening Reform.

In October 2014, the Fourth Plenary Session of the 18th Central Committee made a special study on the comprehensive rule of law and adopted the Decision of the Central Committee of the Communist Party

of China on Several Major Issues on Comprehensively Promoting the Rule of Law.

In October 2015, the Fifth Plenary Session of the 18th Central Committee adopted the "13th Five-Year Plan" plan proposal, which became the closing plan for building a moderately prosperous society in an all-round way.

Strictly governing the Party in an all-round way is the "hands" of this big game. With the victory of the fight against corruption, in November 2016, the Sixth Plenary Session of the 18th Central Committee deliberated on the draft of two documents, "Several Guidelines on the Political Life of the Party under the New Situation" and the Regulations on Supervision within the Party of the Communist Party of China, and studied the comprehensive and strict governance of the Party. The two important documents are oriented by practical issues. Under the above rate, they highlight senior cadres and political ecology, and are committed to building a system "cage" to provide a fundamental guarantee for the development of various undertakings.

On July 26, 2017, Xi Jinping made an important statement that "socialism with Chinese characteristics has entered a new stage of development" in his important speech at the opening ceremony of the special seminar for major leading cadres at the provincial and ministerial levels, and deeply expounded on a series of major aspects of adhering to and developing socialism with Chinese characteristics under the new historical conditions. Theoretical and practical issues have been strongly deployed to the key work in the future.

The first move to settle the son, and the middle market plots the situation.

Xi Jinping once said, "In any work, we should not only talk about two points, but also talk about key points. There is no priority, no distinction,

and it is not good at scratching the eyebrows and beards."

To promote the strategic layout of the "four comprehensive", Xi Jinping not only focuses on the overall planning, but also focuses on holding the "bull's nose". In this game of chess, he frequently dropped his hands at the key point, played the first move, and led the overall trend.

"Wheth well-off or not depends on the hometown." For the all-round well-off, Xi Jinping first put his son in "poverty alleviation" and launched the battle against poverty nationwide. Poverty alleviation and development are important in precision, and success or failure lies in accuracy. Xi Jinping said that "precise poverty alleviation" should be "embroidered".

Regarding the comprehensive deepening of reform, Xi Jinping stressed that "we should focus on the reform of important areas and key links". Under the new normal, China's economy "the structural problems are the most prominent, and the main aspects of the contradiction are on the supply side". Xi Jinping's "supply-side structural reform" launched a decisive campaign to comprehensively deepen reform.

Regarding the comprehensive rule of law, Xi Jinping stressed that "the rule of law system with Chinese characteristics should be the overall goal and grasp". We must follow the law, strictly enforce the law, and investigate the law. Xi Jinping said "fairness and justice" and proposed that "unjust trials must not be allowed to hurt the feelings of the people and harm the rights and interests of the people".

"If you are not right, how can you be righteous?" Strictly govern the Party in an all-round way. Xi Jinping's institutional construction and "key minority" have repeatedly emphasized the need to strictly manage leading cadres at all levels, so as to achieve true and strict management, dare to be strict, and long-term management. Starting from the "Eight Provisions", dozens of Party regulations have been formulated and

revised one after another to make "hard constraints" on the "key minorities"; three rounds of Party education, focusing on the "key minorities", focus on "calcification" and "refueling" on ideals and beliefs.

Combined with the tasks of the "13th Five-Year Plan" period, around the overall goal of building a moderately prosperous society in an all-round way, he fell "innovation-driven" "regional coordination", "green water and green mountains" and "community of destiny"...

Every place is the focus of an important work. Under the planning and leadership of Xi Jinping, all kinds of work have been connected and promoted steadily.

A big game of chess has been played.
